

AUTOMOTIVE COMPUTING CONFERENCE

USA 2024
March 26 + 27
Detroit

You can participate
live on site or remote!

Invitation

At our first Automotive Computing Conference in the US, we aim to revolutionize traditional approaches and align them with the needs of the automotive industry. We would like to talk about future requirements of high performance computing. What impact does the E/E architecture have on domain computing and what can we expect from hyperscaling and cloud computing.

If you have practical experience in these areas in the automotive sector and are interested in giving a presentation, please contact us.

If you are interested being a sponsor or exhibitor do not hesitate to contact us for more information.

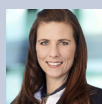

We look forward to hearing from you.

Main Topics

- High Performance Computing – Quo vadis?
- Domain Computing & E/E Architecture
- Hyperscaling and Cloud Computing
- The Software Defined Vehicle
- Virtual Prototyping
- Outlet Chiplets

Members of the Advisory Board

Stefan Bürkle
Robert Bosch

Robert Day
Arm

Alexander Lenk
Amazon

John Kapinos
Synopsys

Jan Rüdiger
Elektrobit

Martin Schleicher
Continental
